BUREAU OF STATISTICS

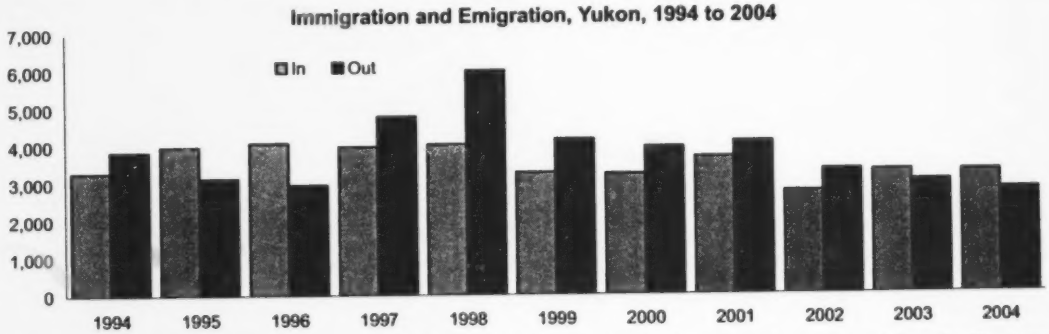
YUKON MIGRATION PATTERNS

1994–2004

Highlights

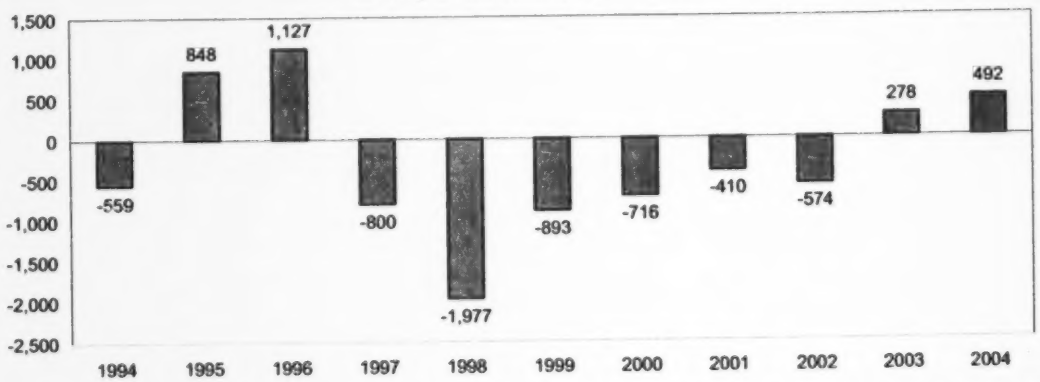
This report examines migration patterns in the Yukon and is divided into three sections. The first section looks at immigration and emigration for the Yukon from 1994 to 2004. It examines both quarterly and yearly migration patterns by gender and age. The second section looks at the median length of residency in the Yukon for out-migrants (those who have moved out of the Yukon during the year and not returned) and non-migrants (those who remained resident in the Yukon during the year) by gender, age and ethnicity from 1999 to 2004. The third section compares continuous length of residency in the Yukon in 2004 with 1999, also by gender, age and ethnicity. All of the migration numbers used in this report are based statistically on the Yukon Bureau of Statistics' population data (which are based on the Yukon Health Care registration file).

Immigration and Emigration, Yukon, 1994 to 2004



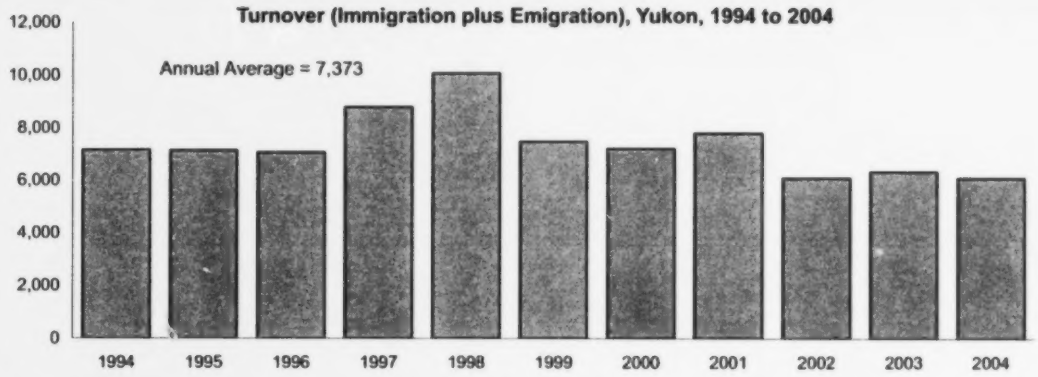
In total, from 1994 to 2004, more people have moved out of the Territory than have moved into the Territory. In 2004, however, 2,795 people emigrated from the Yukon, while 3,287 people immigrated to the Yukon.

Net Migration, Yukon, 1994 to 2004

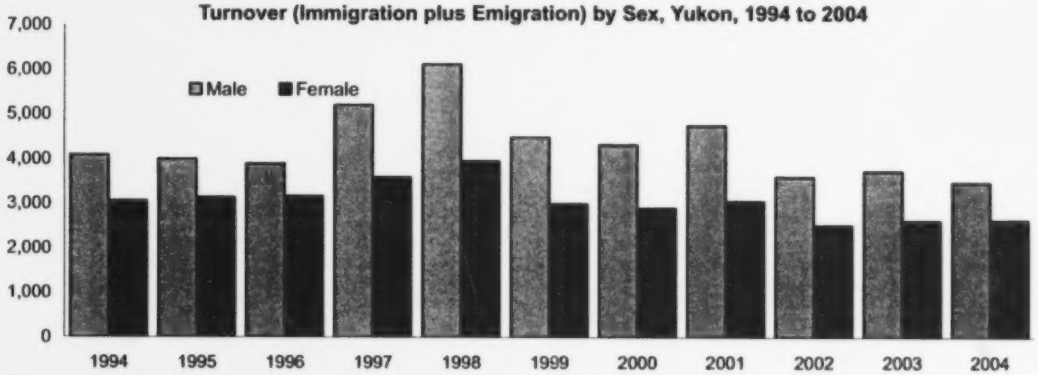


Net migration is the difference between the number of people entering the Yukon (immigration) and the number of people leaving the Yukon (emigration). From 1994 to 2004, average annual net migration for the Yukon was -289. Since 1994, the Yukon has experienced two periods of population growth and two periods of population decline. The largest increase in the Yukon population occurred in 1996 when net migration equalled 1,127, and the largest decrease was in 1998 when net migration was -1,977.

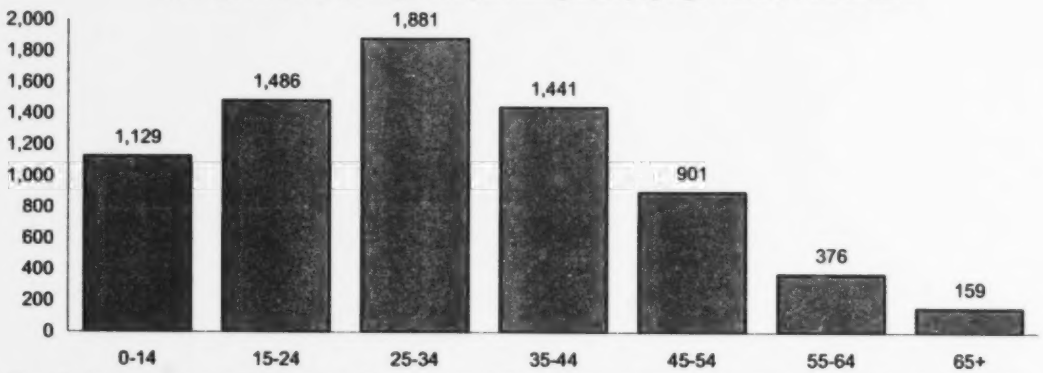
Yearly Turnover



From 1994 to 2004, the average annual turnover (immigration plus emigration) for the Yukon was 7,373. Turnover shows the segment of the population that is mobile and affects things such as the housing market, rental prices and vacancy rates.



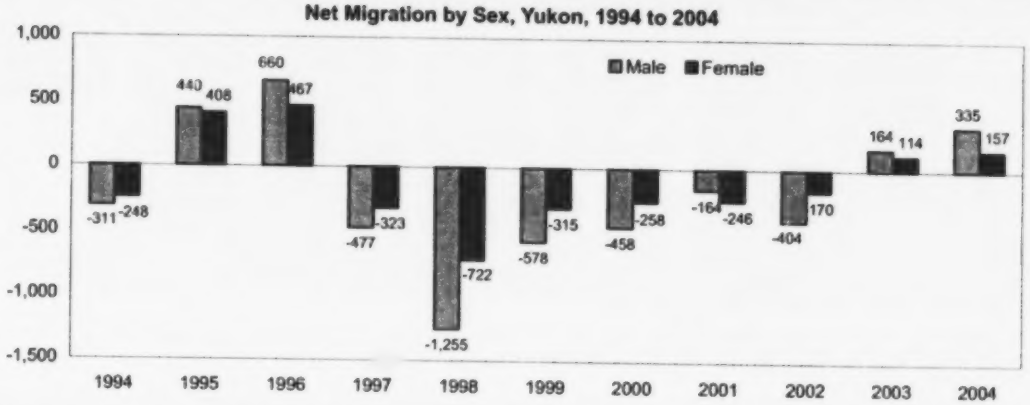
Since 1994, more men than women moved into or out of the Territory, indicating that in the Yukon men are more mobile than women. From 1994 to 2004, the average annual turnover was 4,323 for men and 3,049 for women.



People in younger age groups are also more mobile. Average annual turnover from 1994 to 2004 shows that fewer people in age groups 45–54, 55–64 and 65+ were moving into or out of the Territory. The age group with the highest average annual turnover was the 25–34-year-old age group (1,881).

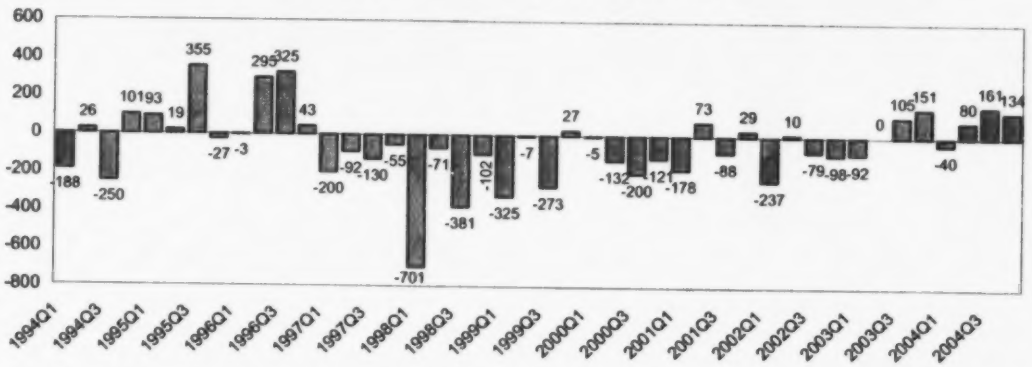
Migration by Sex

Net Migration by Sex, Yukon, 1994 to 2004



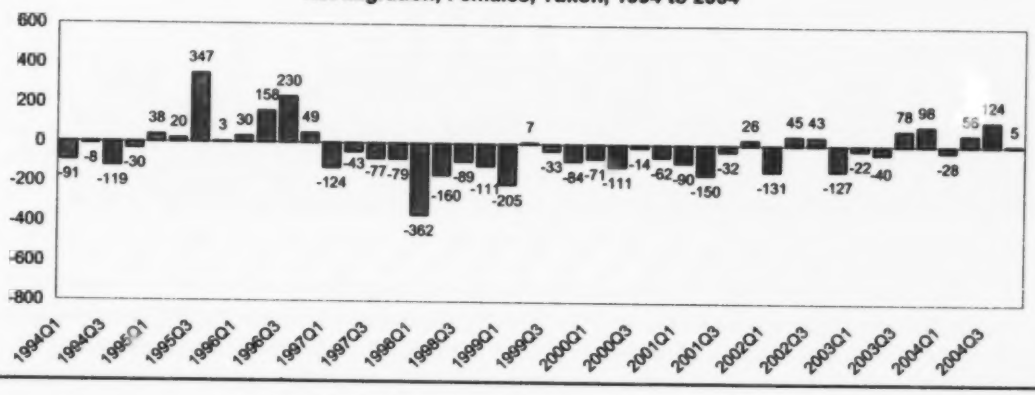
The pattern of net migration is similar for males and females, although males are more mobile, exceeding females in migration in each year except 2001. From 1994 to 2004, average annual net migration was -186 for males and -103 for females. In 2004, net migration for both males and females was positive, following a trend that started in 2003.

Net Migration, Males, Yukon, 1994 to 2004



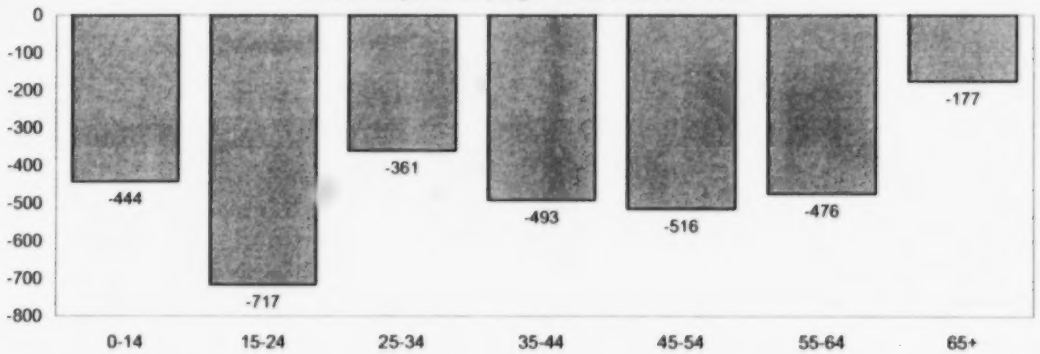
Net migration patterns by quarter are also similar for males and females, although in some quarters net migration for females exceeded net migration for males. From 1994 to 2004, average quarterly net migration was -47 for males and -26 for females.

Net Migration, Females, Yukon, 1994 to 2004



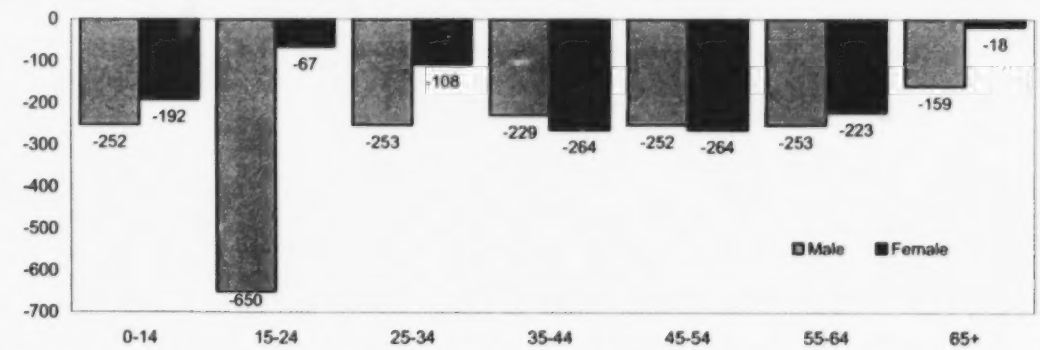
Migration by Age

Total Net Migration by Age, Yukon, 1994 to 2004



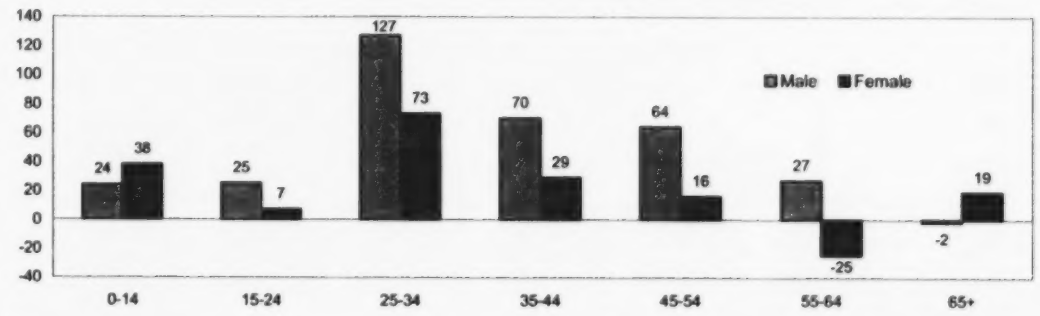
Net migration by age group shows that all age groups decreased between 1994 and 2004. From 1994 to 2004, the age group with the largest decrease in population was the 15–24-year-old age group (-717).

Total Net Migration by Age and Sex, Yukon, 1994 to 2004



The pattern of net migration by age is similar for males and females, with the exception of the 15–24 group and, to a lesser extent, the 65+ age group. All male and female age groups decreased between 1994 and 2004.

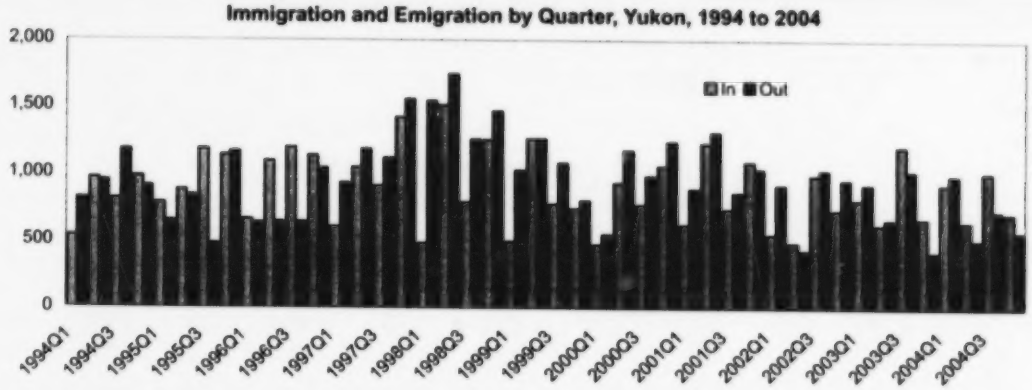
Total Net Migration by Age and Sex, Yukon, 2004



In 2004, net migration by age was positive for both sexes in all age groups except the 55–64 and the 65+ age groups. The age group with the largest positive net migration (+127) was the 25–34-year-old male category. The largest negative net migration (-25) was in the 55–64-year-old female category.

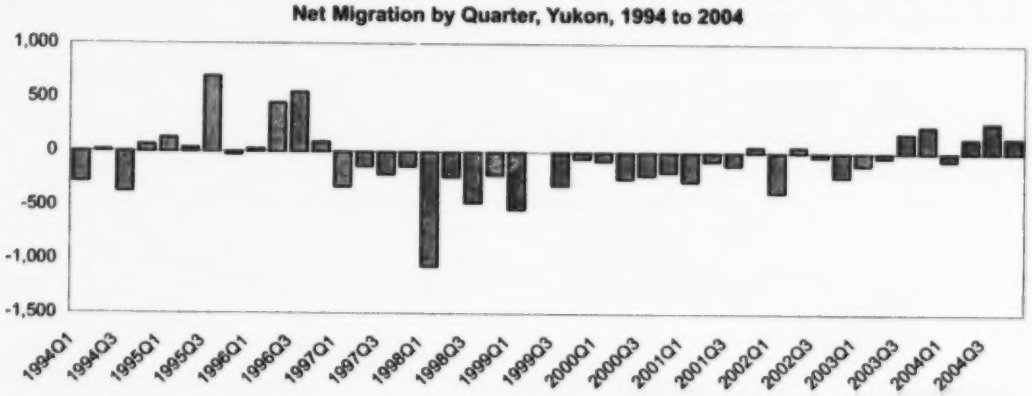
Migration by Quarter

Immigration and Emigration by Quarter, Yukon, 1994 to 2004



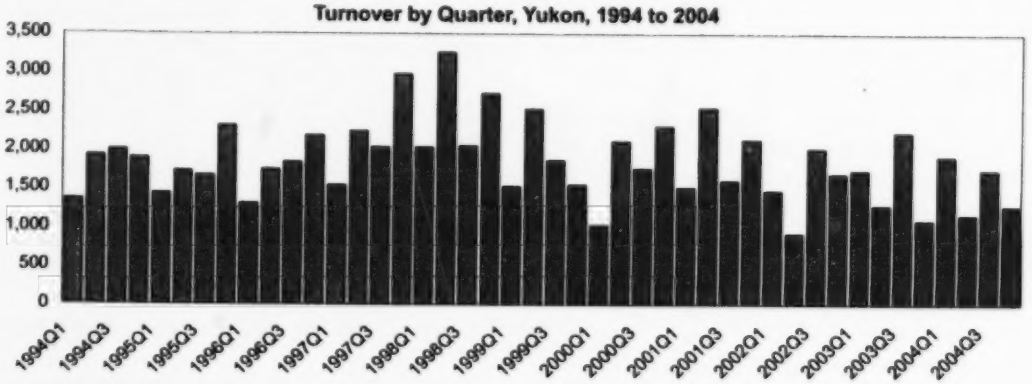
From 1994 to 2004, average quarterly immigration for the Yukon was 885 and average quarterly emigration was 958. In the first quarter of 2004, more people moved out of the Territory than into it. In the final three quarters of 2004, this trend was reversed and more people moved into the Territory than moved out.

Net Migration by Quarter, Yukon, 1994 to 2004



Since 1994, net migration has been positive in 16 quarters and negative or zero in 28 quarters. From 1994 to 2004, average quarterly net migration for the Yukon was -72. Net migration reached a high of 702 in the third quarter of 1995, and a low of -1,063 in the first quarter of 1998.

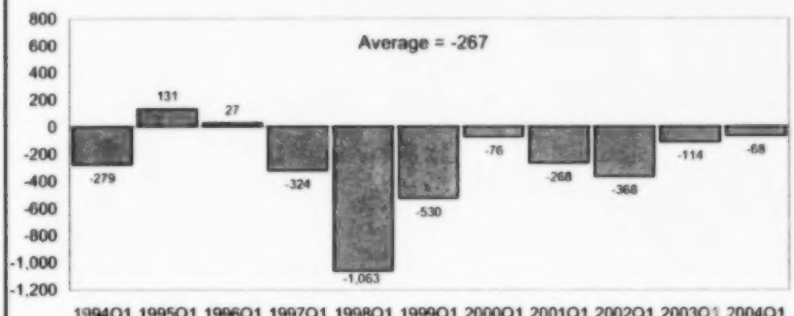
Turnover by Quarter, Yukon, 1994 to 2004



From 1994 to 2004, the average turnover in each quarter was 1,843. Turnover reached a high of 3,255 in the second quarter of 1998 and a low of 919 in the second quarter of 2002.

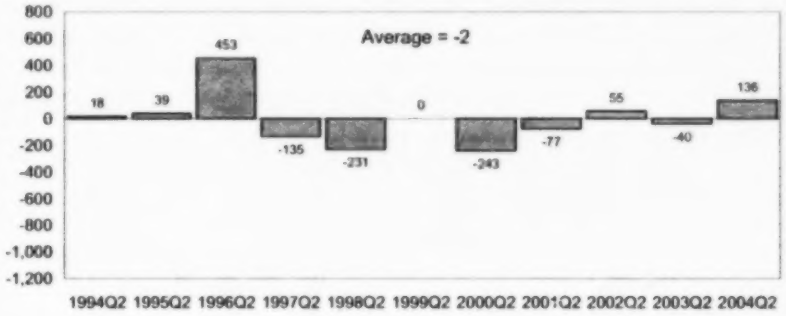
Migration by Quarter

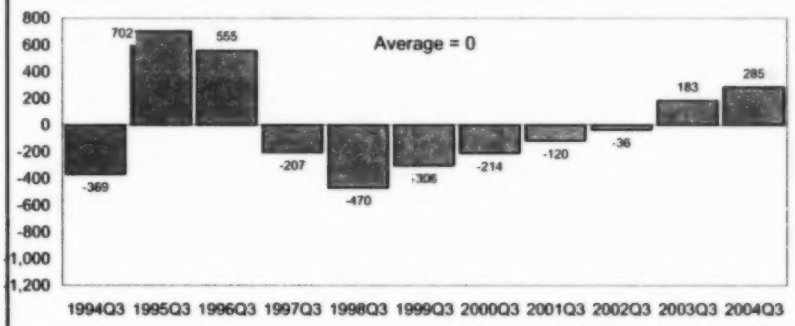
Net Migration by Quarter, Yukon, 1994 to 2004



Data from 1994 to 2004 show that average immigration to the Yukon during the first quarter was -267 and average emigration from the Yukon was 898, resulting in an average net migration of -267. This first-quarter average net migration was lower than any other quarter.

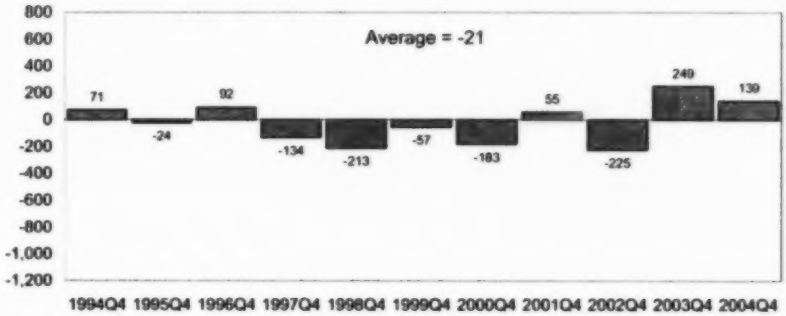
Data from 1994 to 2004 show that average immigration to the Yukon during the second quarter was 971 and average emigration from the Yukon was 973, resulting in an average net migration of -2.



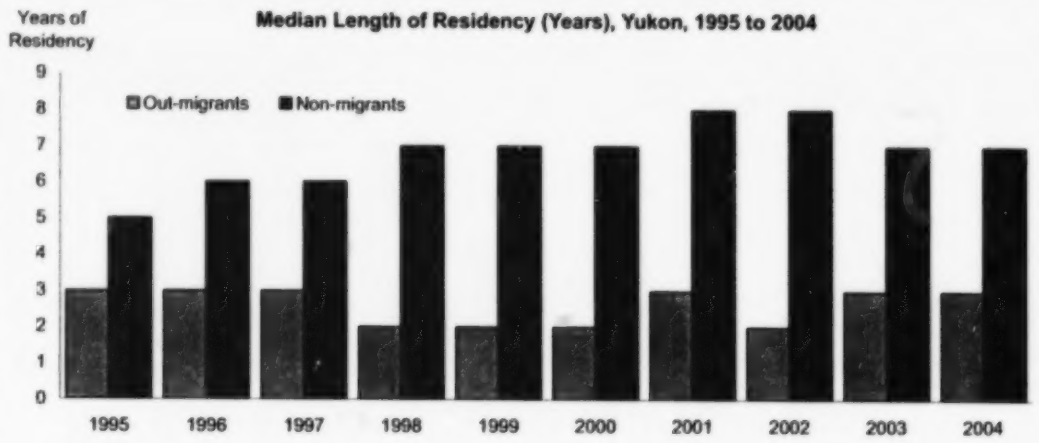


Data from 1994 to 2004 show that average immigration to the Yukon during the third quarter was 944 and average emigration from the Yukon was 944, resulting in an average net migration of zero. This third-quarter average net migration was higher than any other quarter.

Data from 1994 to 2004 show that average immigration to the Yukon during the fourth quarter was 994 and average emigration from the Yukon was 1,015, resulting in an average net migration of -21.

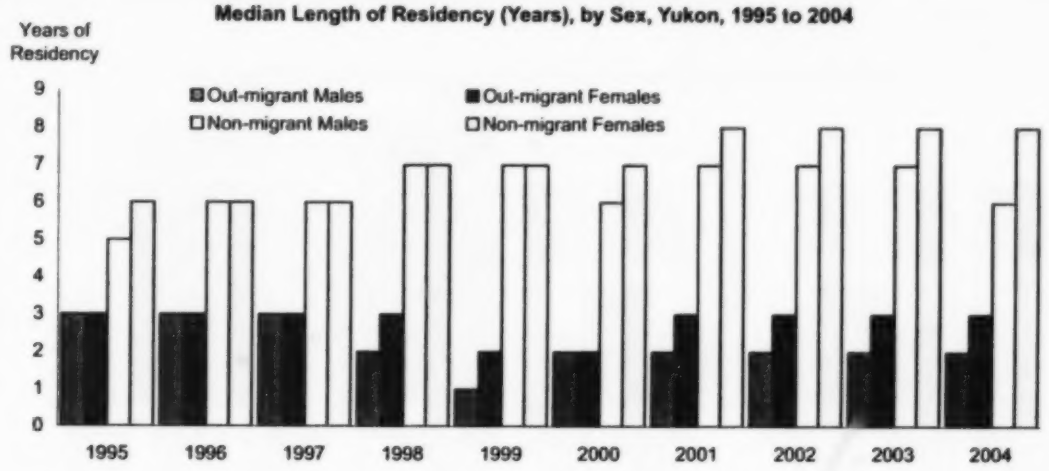


Median Length of Residency



In 2004, the median length of residency for out-migrants (those who moved out of the Yukon during the year) was three years. This is the same as the figure for 2003, and is an increase from the figure for 2002, when the median length of residency was two years.

In 2004, the median length of residency for non-migrants (those who remained resident in the Yukon during the year) was seven years. The median length of residency for non-migrants increased steadily from 1995 to 2002. It fell by one year in 2003 from 2002, and remained steady at seven years in 2004.

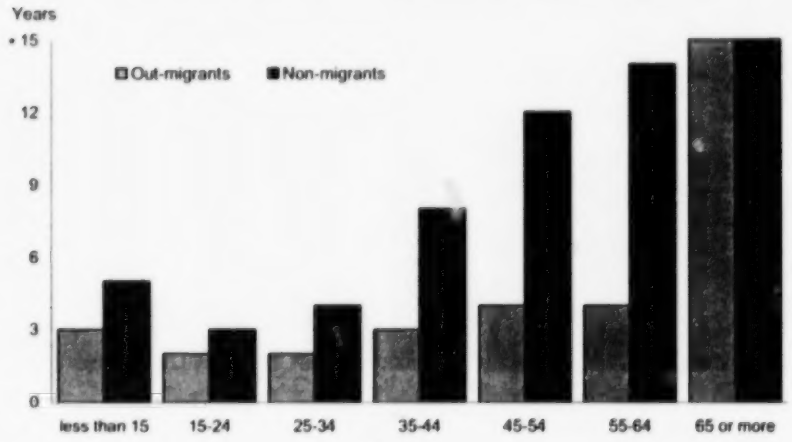


From 1995 to 2004, the median length of residency for out-migrant males and out-migrant females showed that males were slightly more mobile than females. In 2004, the median length of residency for out-migrant males was two years, and three years for females.

Non-migrant males and non-migrant females also have similar migration patterns. In 2004, the median length of residency for non-migrant males was six years, and eight years for females.

Median Length of Residency

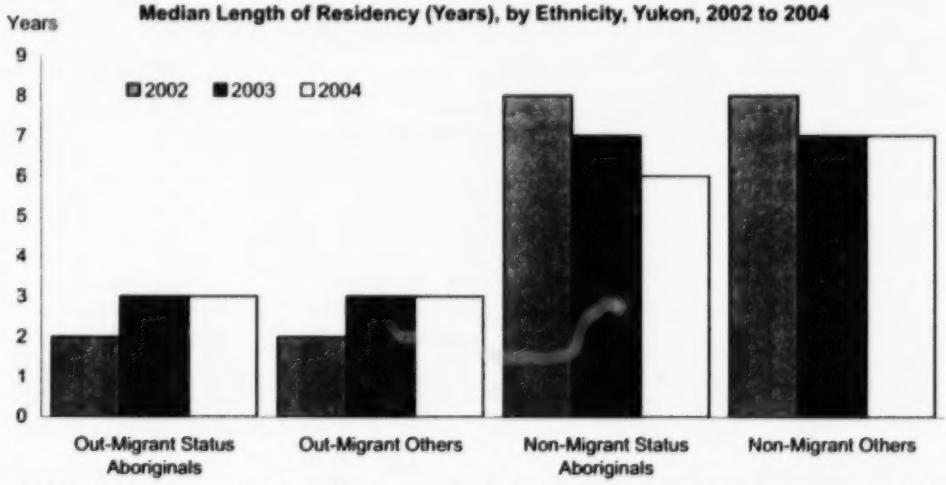
Median Length of Residency (Years), by Age, Yukon, 2004



* Refers to median length of residency as 15 or more years. Data after fifteen years is limited by the Yukon Health Care Registration file.

The median length of residency for out-migrants and non-migrants increases with age (with the exception of the 15–24-year-old age group). People in younger age groups are more mobile than people in older age groups. In each age group, out-migrants are more mobile than non-migrants. From 1995 to 2004, the median length of residency for non-migrants over 65 years of age has been 15 or more years.

Median Length of Residency (Years), by Ethnicity, Yukon, 2002 to 2004

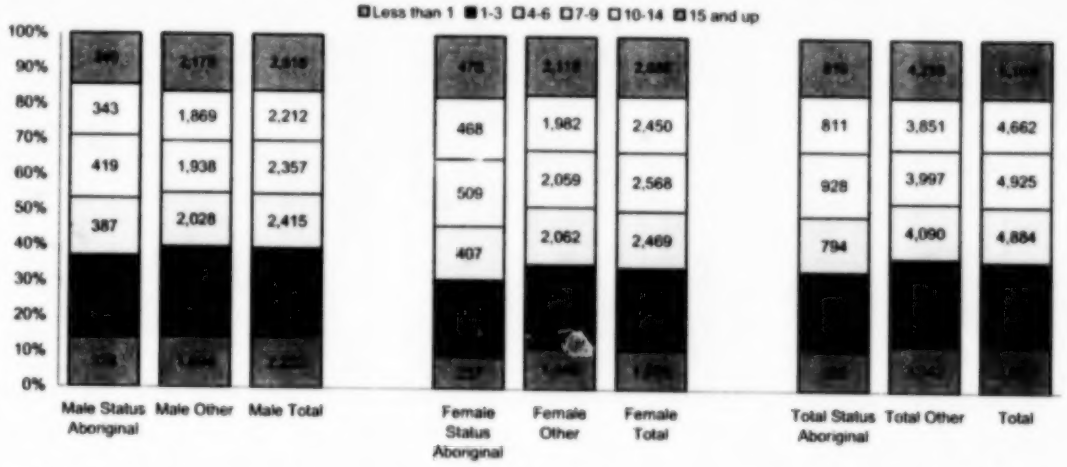


From 2002 to 2004, the median length of residency for Aboriginal out-migrants and non-Aboriginal out-migrants showed that Aboriginals were equally mobile as non-Aboriginal out-migrants. In 2004, the median length of residency for both Aboriginal and non-Aboriginal out-migrants was three years.

The migration patterns for non-migrant Aboriginals and other non-migrants are similar to the patterns of the out-migrant population. In 2004, the median length of residency for Aboriginal non-migrants was six years, and for non-Aboriginal non-migrants it was seven years.

Length of Continuous Residency

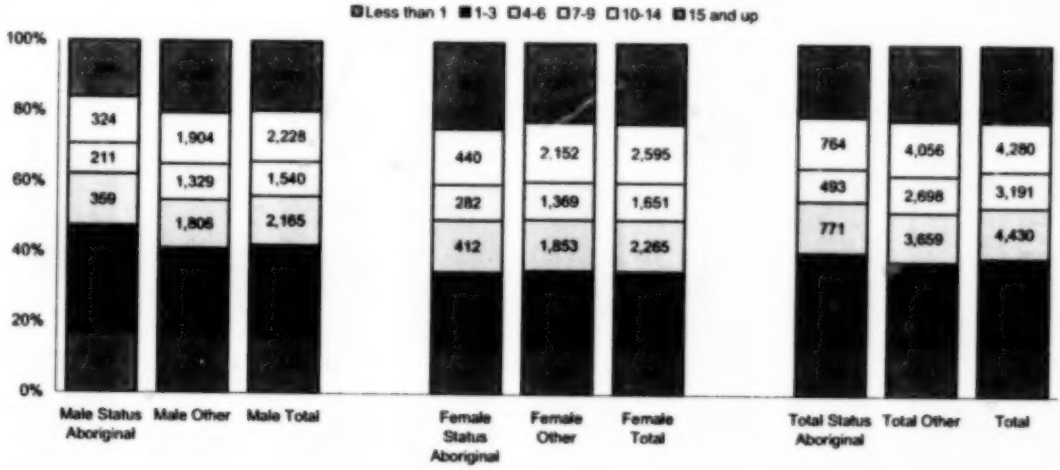
Length of Continuous Residency (Years), by Ethnicity and Sex, Yukon, 1999



The 15 years or more group increased by 1,529 people, or 30.0%, when comparing 1999 to 2004. The largest decrease was in the 7-to-9-year residency group, which decreased by 1,734 people, or 35.2%. Comparing 1999 to 2004, there was also a 12.5% increase in the number of people whose continuous length of residency was less than one year, indicating that more people are immigrating to the Yukon.

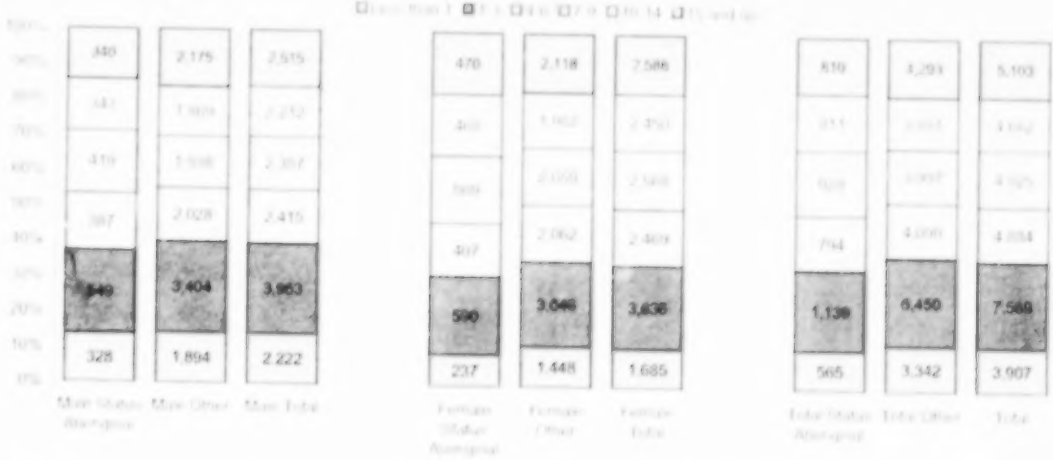
There is no significant difference between the percentage of status Aboriginals (20.5%) in residency group "15 or more years" when compared with non-Aboriginal residents (21.5%). There is a larger percentage of females (22.9%) in residency group "15 or more years" when compared with male residents (19.7%). This indicates that females are slightly less mobile than males.

Length of Continuous Residency (Years), by Ethnicity and Sex, Yukon, 2004



Length of Continuous Residency

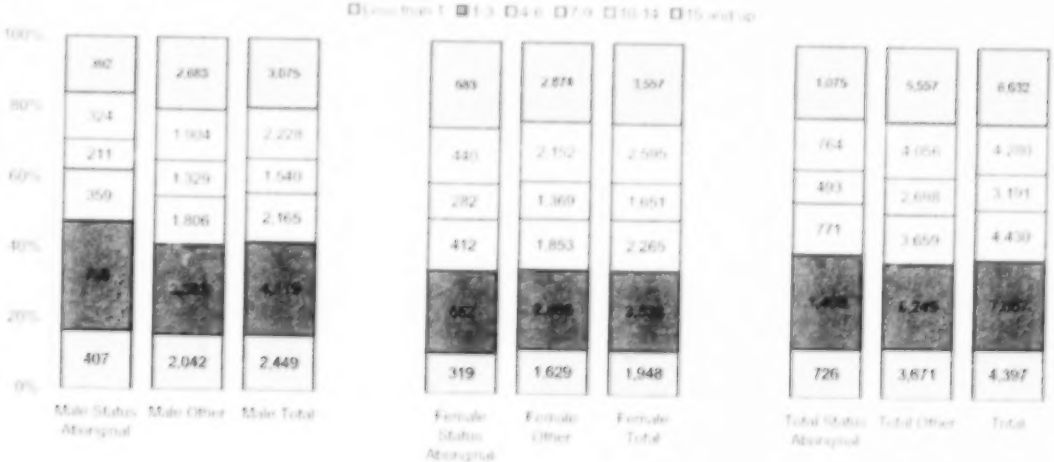
Length of Continuous Residency (Years), by Ethnicity and Sex, Yukon, 1999



The 15 years or more group increased by 1,529 people, or 30.0%, when comparing 1999 to 2004. The largest decrease was in the 7-to-9-year residency group, which decreased by 1,734 people, or 35.2%. Comparing 1999 to 2004, there was also a 12.5% increase in the number of people whose continuous length of residency was less than one year, indicating that more people are immigrating to the Yukon.

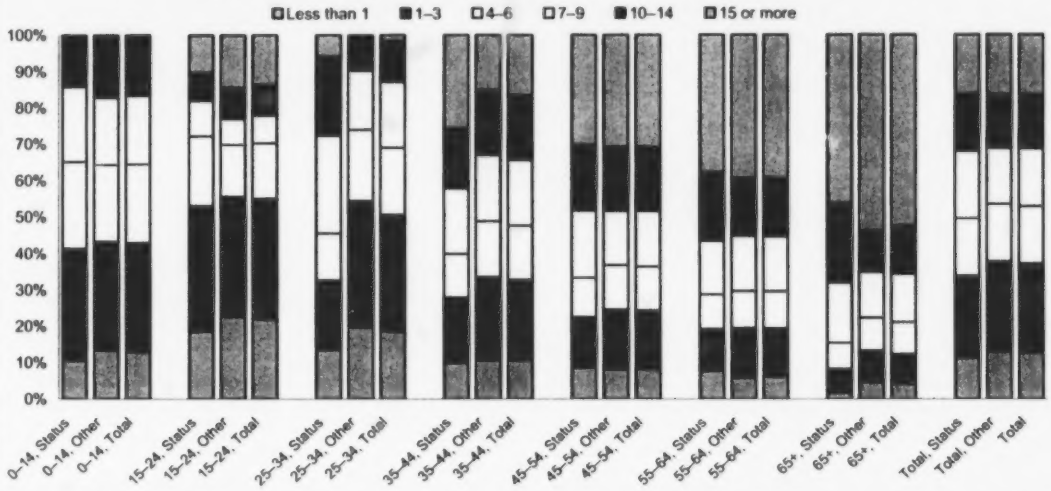
There is no significant difference between the percentage of status Aboriginals (20.5%) in residency group "15 or more years" when compared with non-Aboriginal residents (21.5%). There is a larger percentage of females (22.9%) in residency group "15 or more years" when compared with male residents (19.7%). This indicates that females are slightly less mobile than males.

Length of Continuous Residency (Years), by Ethnicity and Sex, Yukon, 2004



Length of Continuous Residency

Length of Continuous Residency (Years), by Ethnicity and Age, Yukon, 1999



The length of continuous residency for status Aboriginals and non-Aboriginals generally increases with age. People in younger age groups are more mobile than people in older age groups. In 2004, over 56% of residents 65 and older were continuous residents in the Yukon for 15 years or more. For the 25-to-34-year-old age group, only 1.8% had lived in the Yukon for 15 or more years.

The most mobile age group in 2004 in the Yukon is the 25-to-34-year-old age group. This group has the lowest percentage of people who have lived in the Yukon continuously for 15 or more years. The 15-to-24-year-old age group has a high percentage of people who have lived in the Yukon for less than one year. Status Aboriginals are less mobile than non-Aboriginals in the 25-to-34- and, to a lesser degree, the 35-to-44-year-old age groups.

From 1999 to 2004, the number of people who have lived in the Yukon continuously for 15 or more years increased in each age group except for the 35-to-44-year-old age group.

Notes: '15' refers to median length of residency as fifteen or more years. Data after fifteen years are limited by the Yukon Health Care registration file.

These data were generated by comparing January 1st populations in successive years. Anyone who is in both datasets is considered a non-migrant. Anyone who moved out and moved back in within a single calendar year is counted as a non-migrant. Those who were in the population dataset on January 1st of a given year and not in the dataset on the following January 1st are counted as out-migrants.

'Median length of residency' refers to the value at which one-half of the residency lengths are higher and one-half are lower. This middle point is a better indicator of length of residency than an 'average' length would be.

Length of Continuous Residency—Tables
